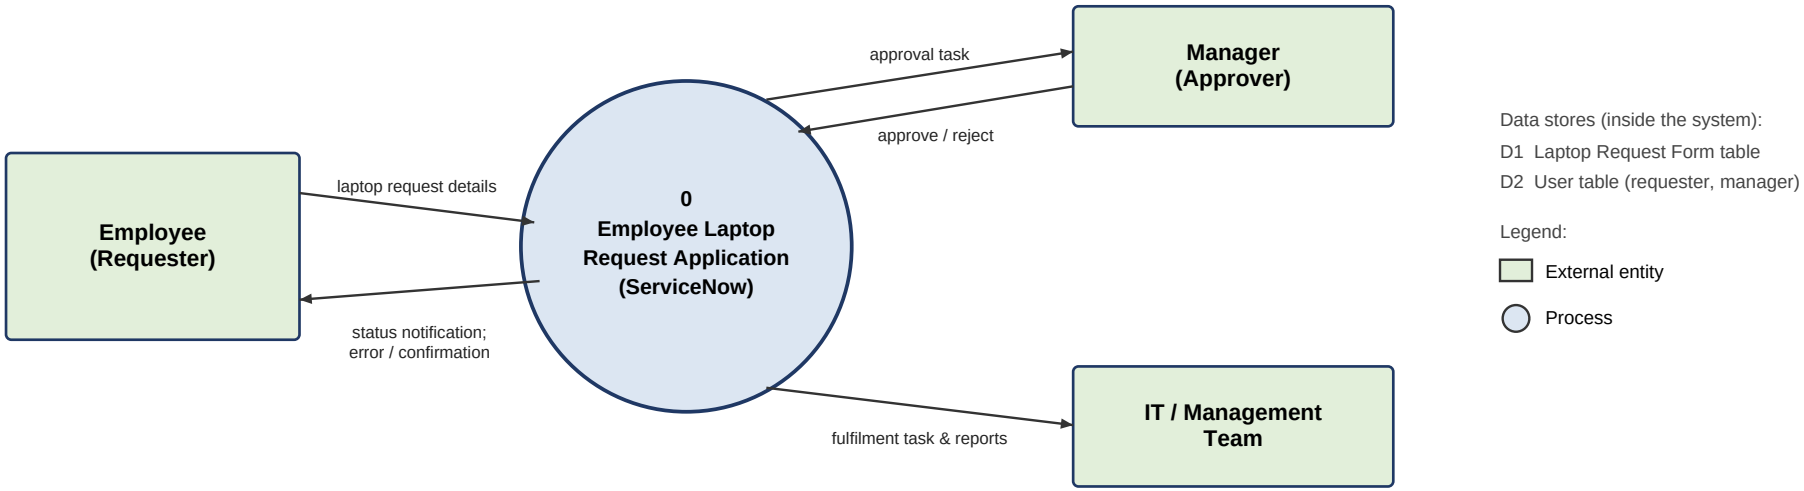
Project Design Phase-II
Data Flow Diagram & User Stories

Date	21 September 2026	**Student Name**	Pasapu Vineela
Team ID	Individual Project	**Regd. No.**	23KD1A05I0
Project Name	ServiceNow-Based Employee Laptop Request Application	**College**	Lendi Institute of Engineering and Technology
Maximum Marks	4 Marks		

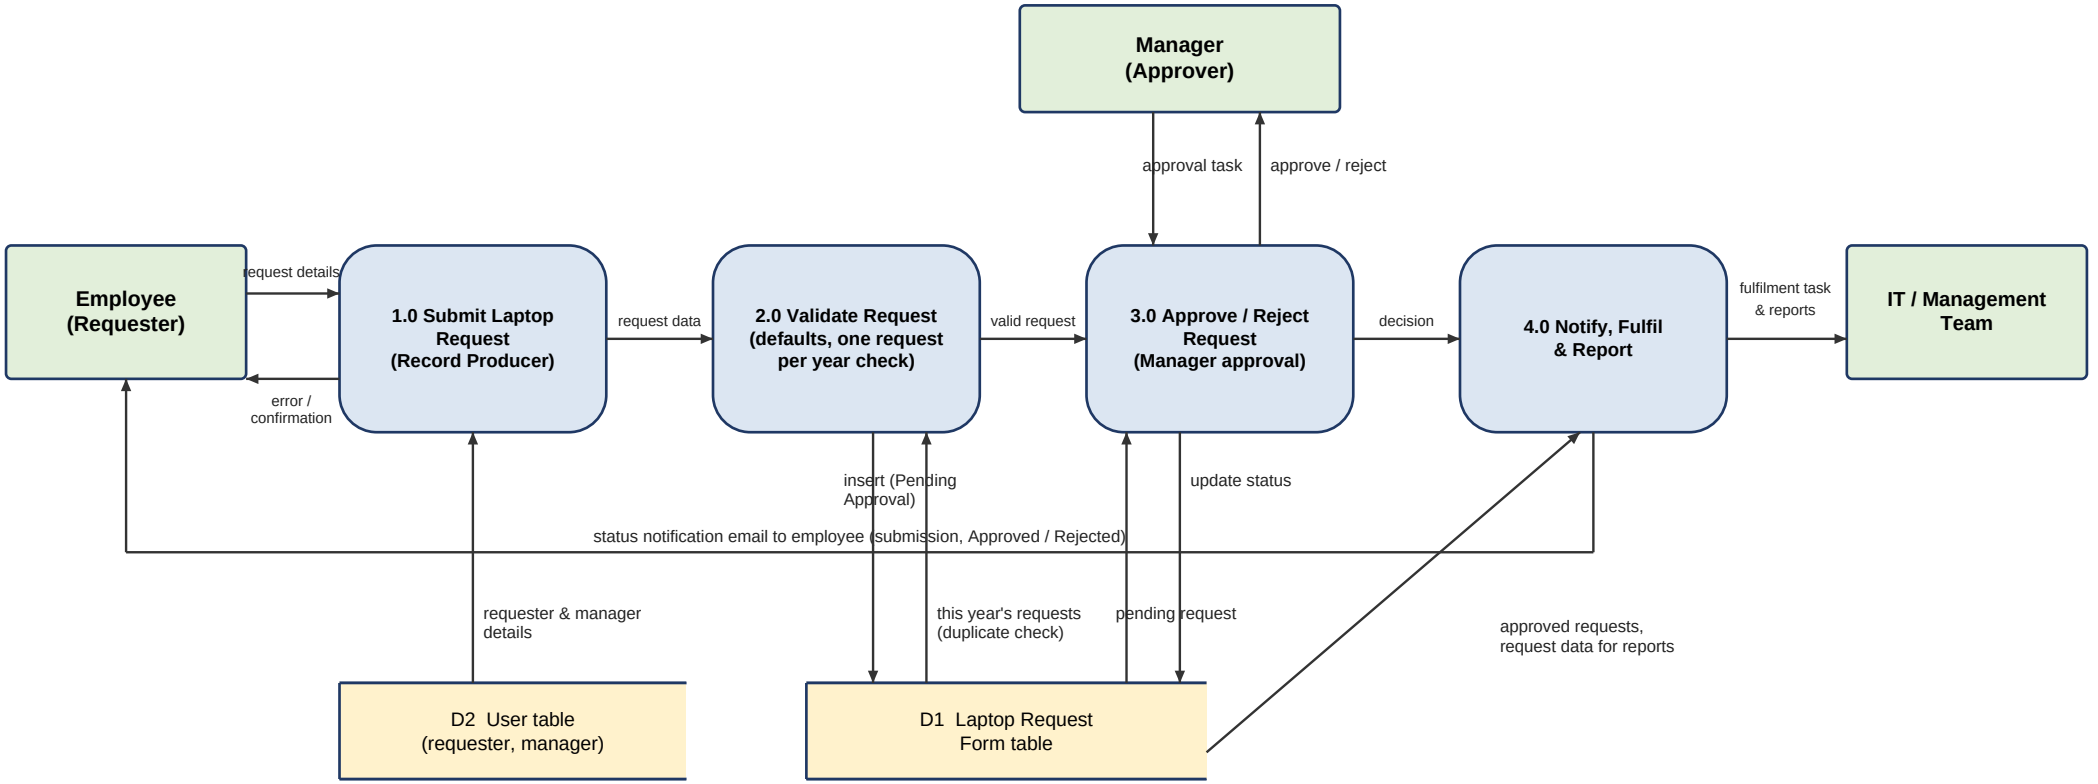
Data Flow Diagrams

A Data Flow Diagram (DFD) is a visual representation of the information flows within a system. It shows how data enters and leaves the system, what changes the information, and where data is stored. The Level 0 DFD (context diagram) shows the whole application as one process; the Level 1 DFD breaks it into its four main processes.

DFD Level 0 (Context Diagram): Employee Laptop Request Application (ServiceNow)



DFD Level 1: Employee Laptop Request Application (ServiceNow)



Legend: green = external entity, blue = process, yellow = data store. Employees see only their own records (role-based access).

Flow description

1. The employee opens the Laptop Request item on the Service Portal and enters the request type (Basic or Advance), short description and reason.
2. The Record Producer (1.0) collects the data and reads requester and manager details from the User table (D2).
3. Validation (2.0) applies default values and checks the Laptop Request Form table (D1) so only one request per employee per year is accepted. A duplicate returns an error message; a valid request is inserted with a unique number and status Pending Approval, and a submission email is sent.
4. The approval step (3.0) sends an approval task to the manager, who approves or rejects. The status is updated in D1.
5. Notify, Fulfil and Report (4.0) informs the employee of the decision, assigns the fulfilment task to the IT team for approved requests, and provides tracking and reports to IT and management.

User Stories

List of user stories for the Employee Laptop Request Application.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Employee (Requester)	Access	USN-1	As an employee, I can log in to the Service Portal with my organization credentials.	I can reach the Service Catalog and the Laptop Request item.	High	Sprint-1
	Laptop Request Submission	USN-2	As an employee, I can open the Laptop Request Form from the Service Portal.	Form opens with requester, email and request date filled in.	High	Sprint-1
		USN-3	As an employee, I can choose the type of request: Basic or Advance.	Selected type is saved with the request.	High	Sprint-1
		USN-4	As an employee, I can enter a short description and select a reason (Software Development, Personal Use, Other).	Reason is captured for justification.	High	Sprint-1
		USN-5	As an employee, I can submit the request.	A record is created with a unique number and status Pending Approval.	High	Sprint-1
	Request Validation	USN-6	As an employee, I am stopped from submitting a second request in the same year.	An error message is shown and no new record is created.	High	Sprint-2
	Request Tracking	USN-7	As an employee, I can view the status of my requests.	Status shows Pending Approval, Approved or Rejected.	Medium	Sprint-2
	Notifications	USN-8	As an employee, I receive an email when my request is submitted.	Confirmation email with the request number is received.	Medium	Sprint-3
		USN-9	As an employee, I receive an email when my request is approved or rejected.	Email received with the final status.	Medium	Sprint-3
Manager (Approver)	Approval	USN-10	As a manager, I receive an approval task for my team member's request.	Task shows request type, reason and requester.	High	Sprint-2
		USN-11	As a manager, I can approve or reject the request.	Status is updated and the employee is notified.	High	Sprint-2
IT / Management Team	Fulfilment	USN-12	As an IT team member, I can see approved requests and fulfil them.	Approved requests are listed for fulfilment.	Medium	Sprint-3
	Reporting	USN-13	As a management user, I can view reports of requests by status, type and reason.	Report displays counts by status, type and reason.	Medium	Sprint-3
Administrator	Configuration & Security	USN-14	As an administrator, I can configure the custom table, fields and choice values, and role-based access.	Employees see only their own requests; IT sees all.	High	Sprint-1
	Release Management	USN-15	As an administrator, I can capture all configuration in an Update Set within the custom application scope.	All artifacts are in the application scope and the Update Set.	Medium	Sprint-1
