ServiceNow – Employee Laptop Request Application Setup

Step-by-step guide for creating the Employee Laptop Request application in ServiceNow Studio

1 **Open All Menus**
From the ServiceNow navigation, select **All** and open **App Engine** → **ServiceNow Studio**.

2 **Create a New Application**
In ServiceNow Studio, click the **Create** button and select **App** to create a new application.

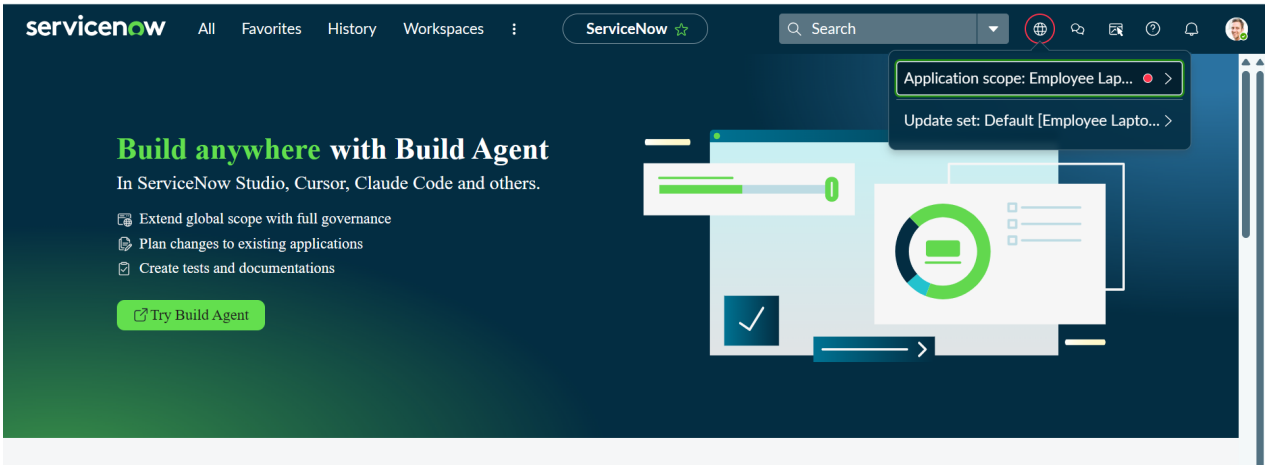

3 **Enter Application Details**
Name: Employee Laptop Request Management System
Scope: Scoped

4 **Continue**
Click **Continue** to create the application. It will serve as the scope for building your laptop request tables, forms, business rules, flows, and notifications.

5 **Return to Home**
Go back to the ServiceNow home page and **reload/refresh** the page.

6 **Verify the Current Application**
After reloading, **Employee Laptop Request Management System** should appear as the current application in the application scope selector. The Update Set should also be associated with the application.

Reference Screenshot

Expected result: After refreshing the ServiceNow home page, the application scope selector should show **Employee Laptop Request Management System** as the current application.
