Empathize & Discover

Ideation Phase

Date	21 September 2026
Team ID	
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	4 Marks

Empathy Map Canvas

An empathy map captures knowledge about a user's behaviours and attitudes to help teams better understand their users.

SAY • I need an easy way to request a laptop. • I want to know whether my request was received. • I need to know if my request is approved or rejected.	**THINK** • Will my request be approved? • Is my reason strong enough for an Advance laptop? • I should not have to follow up repeatedly by email.
DOES • Sends requests by email or informal channels. • Explains the reason for needing a laptop. • Follows up when there is no visible status.	**FEELS** • Frustrated by delays and manual follow-ups. • Uncertain when status is not visible. • More confident when the process is standard and transparent.
PAINS / CHALLENGES • Non-standardized request process • Duplicate or repeated requests • No clear status visibility • Slow, manual approvals	**GAINS / NEEDS** • Simple Service Portal request form • Basic and Advance request types • Clear status: Pending, Approved, Rejected • Policy and role-based access enforced automatically

KEY INSIGHT

The employee needs one centralized place to request a laptop. A Record Producer should capture standard details (request type and reason), the request should be validated against the one-request-per-year policy, routed for approval, and tracked with a clear status.
