Problem–Solution Fit Statement

Employees need a simple and consistent way to request a laptop. When requests are sent by email or informal messages, the request type and reason can be missing, the same employee can request more than once in a year, and approval status is not visible. The Employee Laptop Request Application addresses this through a ServiceNow Record Producer, a custom request table, a business rule that enforces one request per employee per year, and an approval flow built in Flow Designer.

1. CUSTOMER SEGMENTS Employees who use the organization's Service Portal and need a laptop for general office use or for software development and technical work.	**2. CUSTOMER CONSTRAINTS** Employees may be unsure whether to choose a Basic or Advance request, what justification is needed, or whether they are still eligible this year.
3. AVAILABLE SOLUTIONS A ServiceNow Record Producer, a custom Laptop Request Form table, a business rule, Flow Designer approval, and role-based access with ACLs.	**4. JOBS TO BE DONE / PROBLEMS** Request a laptop in one place, choose the request type, give a reason, and know whether the request is Pending Approval, Approved or Rejected.
5. PROBLEM ROOT CAUSE There is no standard request form, no check on repeated requests, and no central record of approval status.	**6. EMPLOYEE BEHAVIOUR** An employee opens the Service Catalog, selects Laptop Request, enters the request type and reason, and submits the form.
7. TRIGGERS An employee joins, changes roles, or needs a laptop for personal or technical work and has to ask the organization for one.	**8. BEFORE / AFTER** Before: requests arrive by email with inconsistent details and no tracking. After: a structured form creates a record that is validated, approved and tracked.
9. OUR SOLUTION A Laptop Request Record Producer maps submitted values to the custom table. A business rule blocks a second request in the same year, Flow Designer routes the request for approval, and ACLs restrict access by role.	**10. CHANNELS** Employees reach the Employee Service Catalog through the Service Portal and complete the Laptop Request form.
11. CUSTOMER VALUE A consistent submission process, a recorded justification, policy enforcement, a clear approval status and secure, role-based access.	

Conclusion

The solution fits the identified employee need by giving employees a structured way to request a laptop and giving IT managers a validated, trackable request to approve. Email notifications, SLA tracking and dashboards are future enhancements and are not claimed as completed.
