PROJECT DESIGN PHASE
PROPOSED SOLUTION

Date	22 October 2026
Team ID	N/A — Individual Project
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	2 Marks

Proposed Solution Template

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Employees need a simple, consistent way to request a laptop. Email-based requests can omit the request type or reason, allow repeated requests in the same year, and give no visible approval status, which makes requests harder to review and follow up.
2	Idea / Solution description	The Laptop Request Application uses a ServiceNow Record Producer to collect the employee, request type (Basic or Advance), reason and status. Submitted values are mapped to the custom Laptop Request Form table (u_laptop_request_form). A business rule enforces one request per employee per year, and Flow Designer routes each request for approval.
3	Novelty / Uniqueness	The project combines a Record Producer, custom table, annual-limit business rule, Flow Designer approval and role-based ACLs (IT Manager view-only, IT Employee create and manage) into one employee-facing request workflow inside ServiceNow, in place of informal messages.
4	Social Impact / Customer Satisfaction	Employees get a clear, structured way to request a laptop and see its status. IT managers receive consistent information with a recorded justification. Actual approval time still depends on the approvers.
5	Business Model (Revenue Model)	This is an internal enterprise service-management solution, not a revenue-generating product. Its indirect value includes fewer duplicate requests, less manual follow-up and more organized approvals. No paid or external revenue model is implemented.
6	Scalability of the Solution	The solution can be extended with more request types, assignment rules, email notifications, reports and dashboards. These are possible future enhancements and are not claimed as implemented.

Implementation note: The document describes the planned functionality of the application and identifies additional capabilities as future enhancements.
