PROJECT DESIGN PHASE
SOLUTION ARCHITECTURE

Date	22 October 2026
Team ID	N/A — Individual Project
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	4 Marks

Solution Architecture:

The architecture illustrates how the employee-facing portal, Record Producer, validation and approval logic, and custom table work together in ServiceNow to capture, validate, approve and store laptop requests.

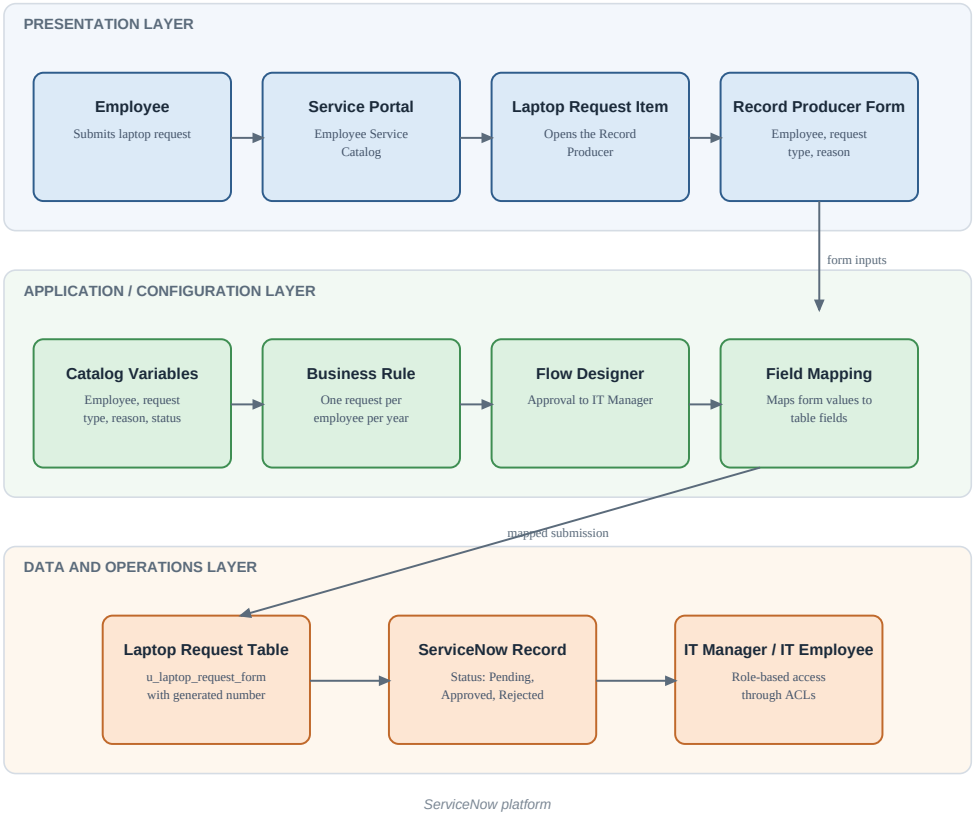

Figure 1: Solution architecture of the Employee Laptop Request Application.

Key Components

Component	Purpose
Service Portal / Employee Service Catalog	Provides the entry point employees use to reach the laptop request form.
Record Producer	Collects the employee, request type and reason, and maps them to the table.
Business Rule	Prevents a second laptop request by the same employee in the same year.
Flow Designer approval	Routes each request to the IT Manager and updates the status.
Laptop Request Form table	Stores submitted requests for review and tracking.
Roles, groups and ACLs	IT Manager has view-only access; IT Employee can create and manage requests.
