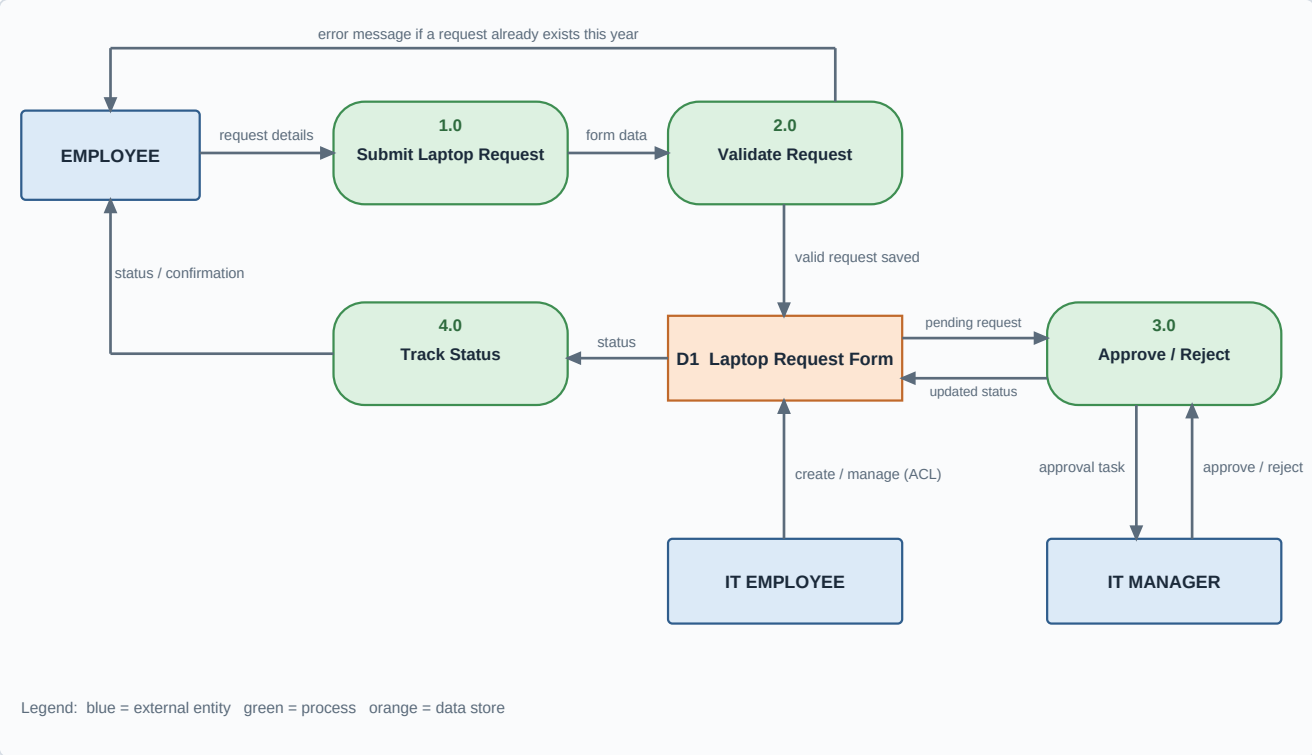
Project Design Phase-II
Data Flow Diagram & User Stories

Date	14 October 2026
Team ID	N/A — Individual Project
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) shows how information enters, moves through, and leaves a system. Employees submit laptop requests through the Service Portal using a Record Producer. ServiceNow validates the one-request-per-year rule and stores the request in the custom Laptop Request Form table. The IT Manager approves or rejects it, and the employee can check the status.



Process flow: Employee submits a request → ServiceNow validates the required information and the annual limit → a record is created in the Laptop Request Form table → the IT Manager approves or rejects it → the employee checks the status and receives confirmation.

User Stories

The following user stories describe the main functions of the Employee Laptop Request Application.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Employee	Submit Laptop Request	USN-1	As an employee, I can submit a laptop request by entering my reason and details through the Service Portal.	Required fields are validated and a new record is created in the Laptop Request Form table.	High	Sprint-1
Employee	Submit Laptop Request	USN-2	As an employee, I can choose a request type, Basic or Advance, to describe how I will use the laptop.	The selected request type is saved on the record and a reference number is displayed.	High	Sprint-1
Employee	Request Validation	USN-3	As an employee, I am told clearly if I have already submitted a laptop request this year.	A second request in the same year is blocked, a message is shown and no record is created.	High	Sprint-2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Employee	Track Request	USN-4	As an employee, I can check the status of my request.	The employee can view Pending Approval, Approved or Rejected and the reference number for their own request.	High	Sprint-2
IT Manager	Approval	USN-5	As an IT manager, I can approve or reject a laptop request.	The decision is saved and the request status updates to Approved or Rejected.	High	Sprint-2
IT Manager	Review Requests	USN-6	As an IT manager, I can view laptop requests with view-only access.	The manager can read request details but cannot create or edit records.	High	Sprint-2
IT Employee	Request Management	USN-7	As an IT employee, I can create and manage laptop requests.	Authorized IT employees can create and update requests on the custom table.	High	Sprint-2
Administrator	Access Control	USN-8	As an administrator, I can restrict request records to appropriate users and groups.	Roles it_manager and it_employee and the ACLs prevent unauthorized viewing or changes.	High	Sprint-2
Administrator	Deployment	USN-9	As an administrator, I can export the application configuration as an Update Set XML.	The Update Set is committed, conflicts are resolved and the XML file can be loaded into another instance.	Medium	Sprint-3
Employee	Notifications	USN-10	As an employee, I can receive an update when my request is submitted or its status changes.	A notification is sent for the request event. Future enhancement; not part of the current build.	Medium	Future

Note: These user stories are a project-specific draft. Adjust the acceptance criteria if your final ServiceNow configuration uses different fields, approval rules or notification behavior.
