College	Lendi Institute of Engineering and Technology

Customer Problem Statement Template:

A well-articulated customer problem statement allows the team to find the ideal solution for the challenges customers face. It also helps us empathize with users and understand how they perceive the product or service. The statements below describe the three main users of the ServiceNow-Based Employee Laptop Request Application.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An employee in a new IT organization who needs a laptop for general office use or software development	Request a laptop (Basic or Advance) and know whether it is approved	I have to send emails or ask verbally, and I cannot see the status of my request	There is no centralized, standardized digital system for laptop requests	Frustrated and uncertain
PS-2	A manager who approves laptop requests for my team	Review the request type and reason and approve or reject it quickly	Details are scattered across emails and there is no approval record	Requests have no fixed format, status tracking or accountability	Overloaded and unsure of my decisions
PS-3	An IT or management team member who allocates company laptops	Track all requests, avoid duplicates and report on allocation	The same employee can request more than once a year and nothing is reported	Manual processes have no validation, duplicate check or reporting	Overwhelmed and not in control

Problem Statements in Full

PS-1: I am an employee in a new IT organization who needs a laptop for general office use or software development. I'm trying to request a laptop (Basic or Advance) and know whether it is approved, but I have to send emails or ask verbally and cannot see the status of my request, because there is no centralized, standardized digital system for laptop requests, which makes me feel frustrated and uncertain.

PS-2: I am a manager who approves laptop requests for my team. I'm trying to review the request type and reason and approve or reject it quickly, but details are scattered across emails and there is no approval record, because requests have no fixed format, status tracking or accountability, which makes me feel overloaded and unsure of my decisions.

PS-3: I am an IT or management team member who allocates company laptops. I'm trying to track all requests, avoid duplicates and report on allocation, but the same employee can request more than once a year and nothing is reported, because manual processes have no validation, duplicate check or reporting, which makes me feel overwhelmed and not in control.

Problem Analysis

Aspect	Details
Root cause	Laptop requests are handled through emails and verbal requests, with no standard form, validation or tracking.
Impact	Delays, duplicate requests, unclear approval status, and no transparent asset allocation or reporting.
Desired outcome	A centralized ServiceNow application where employees submit requests through a Service Portal Record Producer, with validations, one-request-per-year control, status tracking and role-based security.
Success measures	Every request has a unique number and status; duplicates are blocked; reason and type are always captured; IT and management can track requests end to end.
